

# MACHINE LEARNING FUNDAMENTALS

Tensor Flow

Python

NumPy

PyTorch

Plotly

Your Journey Into Machine Learning Starts Here

## **\*Disclaimer\***

EVERYONE LEARNS UNIQUELY.

### **A Clear, Step-By-Step Journey Into Machine Learning**

covering core concepts, mathematical intuition, and hands-on  
model building with real-world use cases.

# TABLE OF CONTENTS

|    |                                                                       |       |
|----|-----------------------------------------------------------------------|-------|
| 01 | <b>INTRODUCTION TO MACHINE LEARNING</b> .....                         | 04-07 |
|    | What Is Machine Learning?                                             |       |
|    | Traditional Programming Vs. Machine Learning                          |       |
|    | Types Of ML: Supervised, Unsupervised, Semi-Supervised, Reinforcement |       |
| 02 | <b>CORE CONCEPTS &amp; MATHEMATICAL FOUNDATIONS</b> .....             | 08-12 |
|    | Linear Algebra Refresher (Vectors, Matrices, Tensors)                 |       |
|    | Probability & Statistics For ML                                       |       |
|    | Calculus For Optimization                                             |       |
|    | Gradient Descent & Cost Functions                                     |       |
|    | Bias-Variance Tradeoff & Overfitting                                  |       |
| 03 | <b>DATA PIPELINE &amp; PREPROCESSING</b> .....                        | 13-17 |
|    | Data Collection & Preparation                                         |       |
|    | Feature Engineering & Transformation                                  |       |
|    | Train-Test Split & Validation                                         |       |
| 04 | <b>SUPERVISED LEARNING</b> .....                                      | 18-27 |
|    | Linear & Logistic Regression                                          |       |
|    | Decision Trees & Random Forests                                       |       |
|    | Support Vector Machines (SVM)                                         |       |
|    | K-Nearest Neighbors (KNN)                                             |       |
|    | Gradient Boosting (XGBoost, LightGBM, CatBoost)                       |       |
|    | Model Evaluation Metrics (Precision, Recall, F1, ROC-AUC)             |       |
| 05 | <b>UNSUPERVISED LEARNING</b> .....                                    | 28-33 |
|    | Clustering (K-Means, DBSCAN, Hierarchical)                            |       |
|    | Dimensionality Reduction (PCA, T-SNE, UMAP)                           |       |
|    | Association Rule Learning (Apriori, Eclat)                            |       |
|    | Anomaly Detection Techniques                                          |       |
